### ABOUT ME

I'm a Computer Science student majoring in Cybersecurity with a minor in Game Design, with hands-on experience across the full stack, from backend logic to frontend interfaces. I have a strong eye for UI/UX and care about building systems that are secure from the ground up. Currently looking for a 4-month internship to contribute to real work and grow with a fast-moving team.

---

### TECHNICAL SKILLS

- Programming Languages: Python, Java, JavaScript, SQL
  - Web Development: HTML, CSS, JavaScript, Flask, REST API
  - Database: MySQL, Firebase
  - Development Tools: Git, GitHub, VS Code, Figma, Linux
  - Security Tools: Nmap, Metasploit, Wireshark
  - Game Development (Minor): Unity, Godot, Blender, Maya
- 

### PROJECT

#### VERIQO — MULTI-FACTOR FAKE NEWS DETECTION SYSTEM

- Developed a browser extension that checks X post reliability and displays a multi-factor credibility score.
- Contributed to system architecture, backend design, machine learning components, and scoring algorithm development.
- Led the project throughout development, staying involved in overall system progress, module coordination, and integration.

## **VHACK 2026 — SECURE TRANSACTION DETECTION PLATFORM**

- Developed the frontend for a digital wallet fraud detection platform that simulates user payments and real-time fraud screening.
- Built the detection flow with approve, flag, and block outcomes, including supporting evidence and dashboard monitoring.

## **SPARKFIT — DESKTOP FITNESS TRACKER APPLICATION**

- Developed a JavaFX desktop fitness tracker with login, profile, goal setting, exercise logging, nutrition tracking, and progress visualisation.
- Connected FXML interfaces with Java logic to process user inputs and display fitness records across multiple screens.

## **TLSW NETWORK DESIGN & PENETRATION TESTING**

- Designed a secure enterprise network with VLAN segmentation, DMZ, firewall, and honeypot to support safer system communication.
- Conducted vulnerability testing using Nmap, Metasploit, and Wireshark, then documented security risks and remediation steps.

## **RANSOMWARE RISK ASSESSMENT**

- Assessed ransomware attack risks and mapped possible threats using X.800, NIST CSF, and MITRE ATT&CK, with recommendations for stronger security controls.

---

## **EDUCATION**

**Bachelor of Computer Science | Taylors University**

Specialisation in Cybersecurity | Minor in Game Design

CGPA: **3.66 / 4.00**
